

EMERGENCY NOTIFICATION PLAN FOR SMALL WATER SYSTEMS

The California Health and Safety Code, Division 5, Part 1, Chapter 7, Article 5, Section 4029, requires all water systems to have an Emergency Notification Plan submitted to and approved by the San Joaquin County Environmental Health Department and updated annually. This plan is to be implemented whenever the State or Department determines that your water supply fails to meet water quality standards and represents an imminent danger to the health of the water users.

Your plan must include specific information regarding how an emergency water situation would be handled at your site and the procedure to be followed for notifying and protecting customers.

An appropriate method of notifying small water system users of imminent danger from unsafe water must be used. Users must be informed that water must not be consumed until it is safe to do so. Please acknowledge methods you will use to notify your water system in the event that you must initiate your Emergency Notification Plan. Please return this form to this Department within 7 days of receipt.

I propose to notify my water consumers by the following method:

- Post warnings in a conspicuous place
- Shutting off all water
- Door to door contact
- Written hand outs
- Telephone

I propose to notify my water consumers by the following alternate method:

Provide names, addresses, and day/night phone numbers for two contacts this Department could reach in an emergency.

1.

Name	Address	Phone (Day and Night)
2.

Name	Address	Phone (Day and Night)

I concur with the above-mentioned plan.

Name of water system	Signature and Title	Date
----------------------	---------------------	------
