

Overview:

For over 3 decades CSTI has been the leader in the area of emergency response exercise design training. Currently, CSTI has embarked on a new practical exercise design course which encompasses the HSEEP Training Course (G-146), FEMA's IS-120 A (Intro to Exercises), FEMA's IS-139 (Exercise Design), and key elements of the original CSTI Enhanced Exercise Design Course. This hybrid course focuses on the unique emergency management exercise needs of governmental & private entities. The focus of this all-hazards exercise training is to provide the **best practices** as it relates to exercise design and development of an exercise design team. The course includes:

- Establishing the exercise steps
- Constructing an exercise plan
- Organizing the design team
- Evaluating exercises (EEG)
- HSEEP Doctrine & Systems
- Review Exercise Program
- Design and implementation of a discussion based and operational exercise

Who Should Attend?

Emergency management staff having responsibility for developing and conducting training exercises, **emphasizing exercise design teams.**

This course meets HSEEP Mobile Field Course methodology, concepts, and terminal/enabling objectives (Now known as FEMA G-146).

Must submit registration form by March 2, 2009
