

We're building a better Zoo!

Please excuse our construction.

A major project currently underway will provide a **new habitat for snow leopards** and an **exciting underwater viewing environment** for the **Asian small clawed otter**.

Asian Trek will be under construction into 2010, but should not interfere with visiting the many other animals at **Micke Grove Zoo**.

We have also recently opened a renovated *Tropical Forest Canopy* exhibit, featuring **green iguanas** and **Prevost squirrels**.

By providing a *climate controlled environment*, including special high intensity full-spectrum light, we are providing for the unique and *specialized requirements* for **maintaining healthy iguanas**.

“*Lorikeets!*”, an **interactive lorikeet feeding experience**, is another exciting change. Due to be open by the end of April, this temporary exhibit will introduce visitors to some interesting species and allow an up-close view of some of the *world's most colorful birds*.

We apologize for any inconvenience as we make these improvements, and encourage you to visit Micke Grove Zoo and watch the progress.
