PUBLIC NOTICE
Fact Sheet
Pending Case Closure for gross Used Oil Filter Recycling Investigation Site

Global Materials Management, on behalf of the San Joaquin County Environmental Health Department (SJCEHD), invites public comment regarding consideration by the SJCEHD to grant No-Further-Action status for the subsurface petroleum contamination from an unknown source at the subject site (Site) identified below:

SUBJECT SITE:
Site Name: (formerly) Global Materials Management
Site Address: 1640 N. Broadway, Stockton 95205
SJCEHD Site Code: PR0542676

PUBLIC COMMENT PERIOD: 30 Days – from 10/29/2020 to 11/30/2020 (note: the 30-day time frame should commence on the anticipated mailing and posting date of the SJCEHD-approved Public Notice)

CASE SUMMARY:
The SJCEHD in cooperation with Global Materials Management, and AdvancedGeo, Inc. (AGI, formerly AGE, an environmental consultant) have evaluated soil conditions, and potential health concerns and environmental impact at the subject Site resulting from unauthorized release of gross contamination from a waste oil recovery and used oil filter recycling business. 2 rounds of excavations to remove the contaminated soil and multiple soil samplings have been conducted between 2017 and 2019 at the subject Site.

Soil investigations were conducted in August 2017, August and November 2018, and January 2019 to characterize the soil impact at the subject Sitey. AGI has defined the horizontal and vertical extent of the petroleum hydrocarbons and metal contamination in the soil. Potential negative effects of the contamination on human health and the environment were evaluated by AGI using the guidelines of Department of Toxic Substances Control Screening Levels (DTSC-SL) under the California DTSC Human Health Risk Assessment (HHRA) and Human Ecological Risk Office (HERO), and the Regional Screening Levels (RSL) for commercial established by the San Francisco Bay Regional Water Quality Control Board, as well as the hazardous waste criteria for total and soluble lead in several reports: Revised Site Assessment Report in November 2018, and the Addendum to Revised Site Assessment Report in September 2020. AGI has recommended no further site assessment or confirmation soil sampling is required. On the basis of soil contamination characterizations and risk assessment, the SJCEHD has concluded that the site has met the Clean Up Goals as established in the Preliminary Site Assessment Work Plan by AGI dated July 30, 2018 when the subject Site entered into Voluntary Clean Up Program Remedial Action Agreement with the EHD ON April 20, 2018.

The SJCEHD will consider anticipates issuing a No Further Action Required letter for the subject Site if there is no comment within the days following this posting.

WHERE TO GET MORE INFORMATION
Upon written request, the Site case file is available for review at the SJCEHD office located at 1868 East Hazelton Avenue, Stockton, California 95205. An SJCEHD file review request form can be obtained from the SJCEHD website at http://www.sjgov.org.

HOW TO PARTICIPATE
Interested individuals have the opportunity to learn more about this case and voice concerns regarding its pending closure by submitting comments to Jeffrey Wong at the SJCEHD. Jeffrey Wong can be reached at (209) 468-0335, via e-mail at jwong@sjgov.org, or in writing at 1868 East Hazelton Avenue, Stockton, California 95205.
