HOWARD ROAD EROSION CONTROL
FACT SHEET

**Purpose of Project:**
- The purpose of this project is to repair a section of embankment on the westbound approach to the Howard Road bridge over the San Joaquin River, where the slope failed during the spring of 2017.

**Project Benefits:**
- It will prevent future failures of the embankment.
- The embankment will have improved stability compared to the original design, due to geogrid reinforcement and a gentler slope.

**Public Outreach:**
- Regular updates to the Farm Bureau on the status of the project, including its purpose and need, and features.
- Portable Message Boards with construction dates and times will be placed along the project limits in advance of the construction start date.

**Schedule:**
- Construction will commence on or about September 26, 2022, and is expected to be completed within seven weeks.

**Project Cost/Funding:**
- Total Project Cost = $1,131,400
- Funded by the Federal Emergency Management Agency Hazard Mitigation Grant Program (FEMA HMGP) and
- Local Measure K half-cent sales tax.

**Contact:**
- For questions or additional information regarding this project, please contact Project Engineer, Emmanuel Salcedo at (209) 468-3016 or PWHowardRepairs@sjgov.org
